

Commercial High-Purity Water Systems

Water Control is your one-stop provider for custom-built, high-purity water (RO/DI) systems. With over 45 years of experience in specialty water filtration solutions, we know exactly what's involved in getting a high-quality system installed and running. From the initial water testing to the design, commissioning, and aftermarket service, our team of experienced technicians takes the time to ensure you're completely satisfied and comfortable with your water filtration system.

Water Control integrates high-quality components from the industry's leading suppliers, then custom-fabricates them into complete "plug-and-play" packages that require just simple water, drain, and electrical connections. We thoroughly test each of our systems prior to delivery.

Common High-Purity (RO/DI) Water Applications

- Medical sterilization equipment
- Humidification
- Laboratories
- Industrial
- Vehicle wash
- Boiler feed
- Misting equipment
- Ice and drinking water production
- Aquariums
- Steam systems

We understand the complex commercial construction process, including the extensive documentation required to bring your project to fruition. We also offer a wide array of BAS integration options.

Count on us for:

- Water test services

- Project analysis and design (including site visits)
- Specification writing and BIM (Revit) renditions
- Detailed project submittals
- Quality system fabrication and testing
- Delivery, startup, and commissioning services
- Troubleshooting
- Accredited specifier training seminars

Warranty, aftermarket services, and service agreements available

High-quality water filtration services coupled with knowledgeable sales representatives place Water Control as second-to-none.
